

UNIFIED HIS / HMS PLATFORM

One record. Every department. The whole stay, start to finish.

From the first appointment to the final invoice, Lichen MD keeps a patient's story intact — across registration, clinical care, diagnostics, pharmacy, beds, and billing — so nothing gets lost at the handoff.

PAT

LAB

one continuous patient journey — every module reads and writes the same record

15

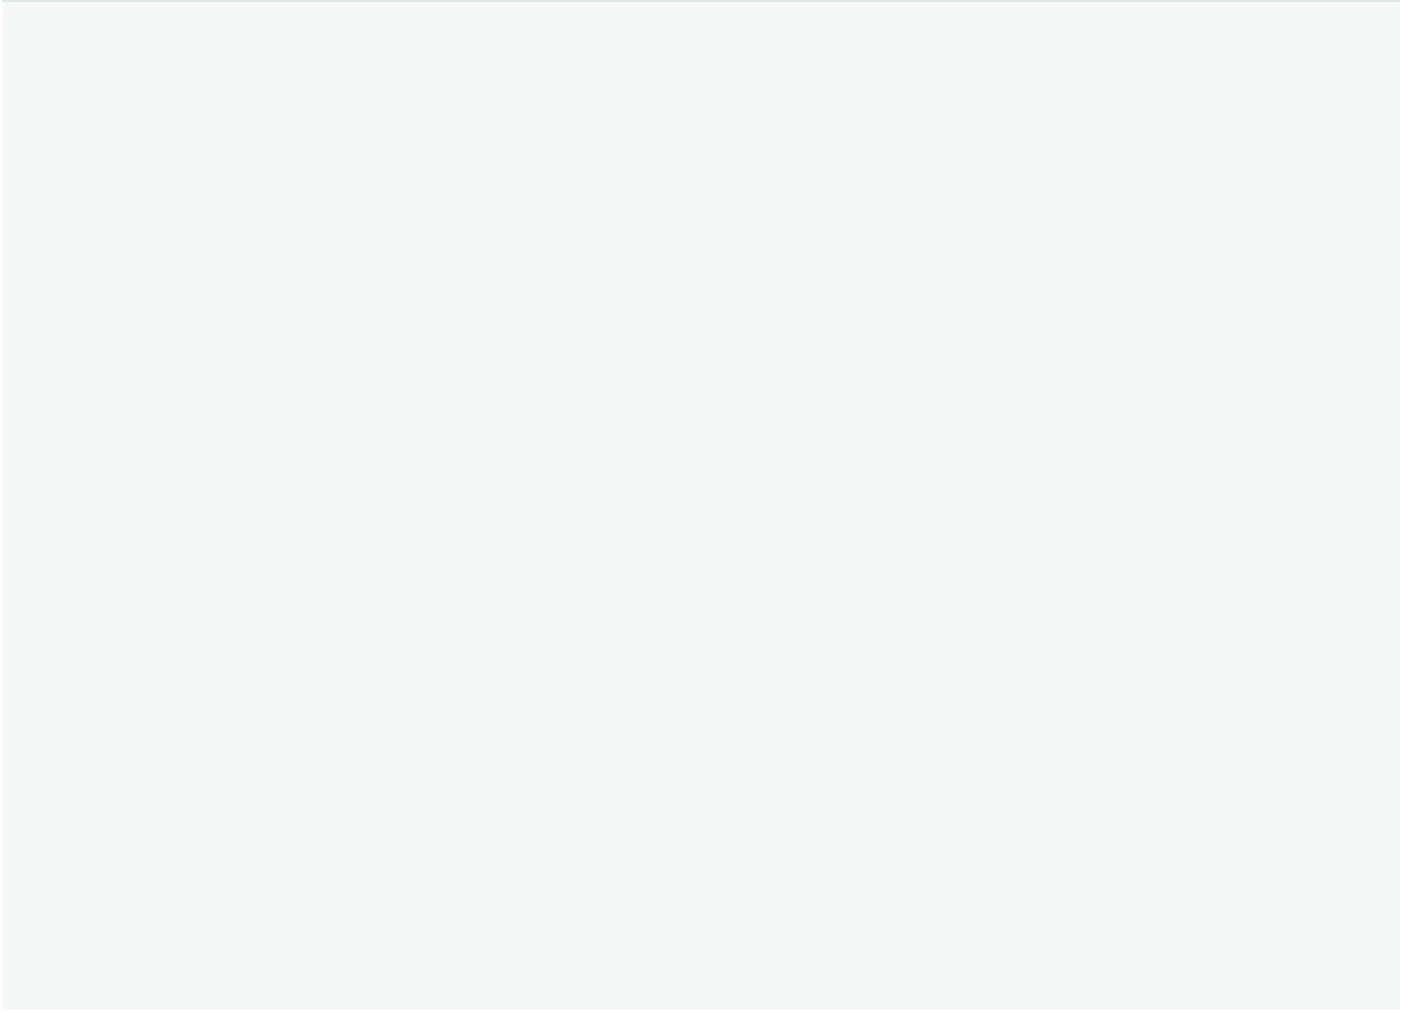

Clinical, administrative, and financial modules working off one patient record.

27

Steps in the golden-path journey, from first appointment to post-discharge follow-up.

22

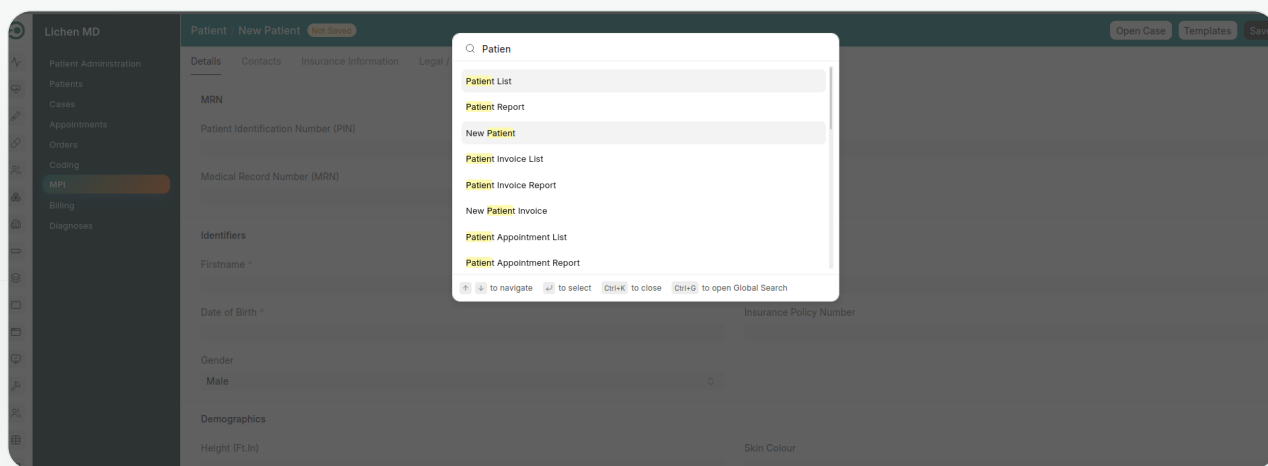

Point integrity checklist the platform is built to hold, from admission to audit.

BUILT FOR SPEED

Everything, one search away.

A single command bar reaches every record, list, and workspace in Lichen MD — patients, cases, orders, reports. Press **Ctrl + G** and start typing.

WHAT'S INSIDE

Every stop on the patient's stay, covered.

Fifteen modules, grouped the way a patient actually moves through your hospital — not the way an org chart is drawn.

01 Front office & scheduling

PAT REG

Patient administration

One stable identity per patient, with duplicate matching and a full audit trail on every demographic change.

APT

Appointment & scheduling

Book, confirm, and manage wait-lists across providers and locations, visible on the patient's timeline the moment it's set.

ADM

Pre-admission & admission

Planned or emergency admission, with eligibility checks, consent capture, and admission order sets built in.

02 Clinical care

The screenshot shows a web application for clinical case management. On the left is a dark sidebar with navigation links: Carecenter, Patients, Cases (highlighted), Appointments, and Coding. The main content area is titled 'Case / Acute abdominal complaint' with an 'Active' status. It contains several sections: 'Case Details' with fields for Internal ID (CIN-00005), Case Title (Acute abdominal complaint), and Patient (Emily Christie Cheng); 'Status' (Active); 'Confidentiality level' (NORMAL); 'Case Type' (In-Patient); and 'Unit / Ward' (General Ward). A 'Date Opened' field shows 12-08-2026. On the right, there's a panel for the specific case with options to Assign, Attachments, Tags, and Share, along with a 'Last Edited By You' timestamp of 5 hours ago.

ENC VIT DIA

Clinical assessment

Vitals, history, and diagnosis captured against the right encounter, chronological and never out of order.

ORD

Order entry system

Lab, imaging, medication, procedure, and referral orders, routed to the right work queue with a visible status history.

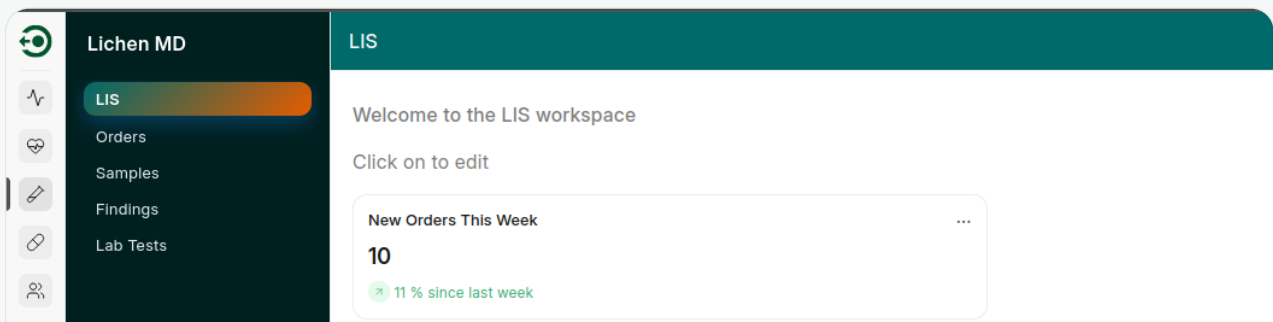

NUR

Nursing & inpatient care

Care plans, tasks, and recurring observations that survive shift handoffs and unit transfers intact.

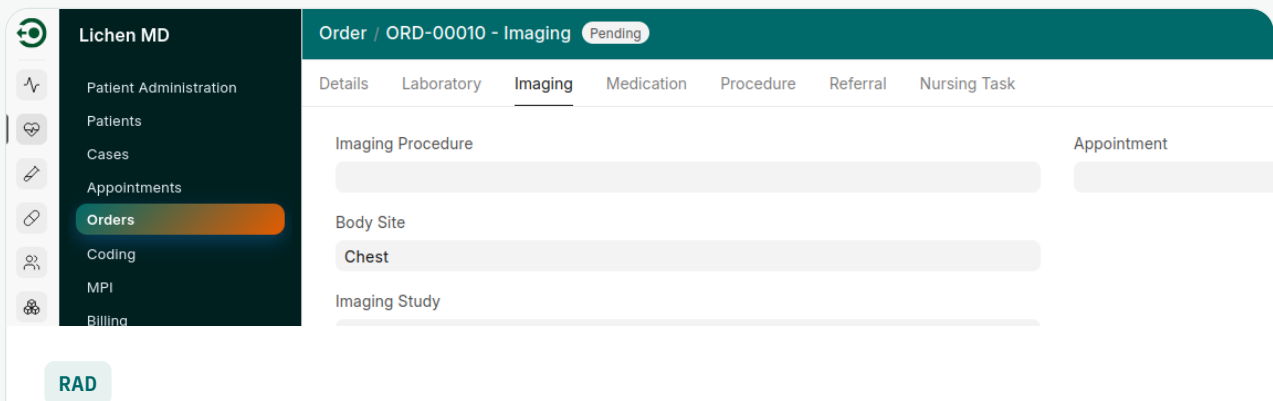

03 Diagnostics & treatment

LAB SMP

Laboratory information system

Specimen collection through result release, with full chain of custody back to the ordering encounter.

RAD

Imaging & PACS

Imaging orders, resource scheduling, and studies linked straight back to the clinical order that requested them.

INV

Pharmacy stock & inventory

Batch- and warehouse-level stock tracked down to every dispense, with a full, unalterable movement ledger behind it.

04 Beds, discharge & follow-up

Lichen MD

Resource Center

Welcome to the Resource Center workspace

Manage various platform as well as system resources and data types and catalogs from here.

Numbers at a glance

Rooms 3 0 % since last week	Beds 2 0 % since last week	Nurses 2 0 % since last week
---	--	--

Work Items

BED TRF

Bed & transfer management

Bed allocation and unit transfers that release and assign atomically, so a bed is never double-booked.

DIS

Discharge management

Planned, unplanned, or against-medical-advice discharge, each closing the clinical record without erasing it.

FUP

Follow-up & longitudinal care

Post-discharge visits scheduled with the full prior record on hand, and readmissions linked back to the original case.

BILCLMPAY

Billing & revenue cycle

Charges generated straight from chargeable clinical events, with claims and payments tracked separately from the bill itself.

RPT

AUD

Reporting & audit

Reports that reconcile to real transactional data, backed by audit logs on every high-risk action.

SEC

INT

Security & integration

Role-based access enforced server-side, with idempotent, recoverable integrations to the systems around you.

BUILT TO HOLD UNDER REAL HOSPITAL LOAD

The record survives the handoff. Every time.

The hardest defects in any hospital system happen at the boundaries — between departments, between shifts, between a bill and a chart. Lichen MD is engineered against a 22-point integrity checklist covering exactly those seams.

- ❑ Patient identity stays deduplicated
- ❑ Registration is auditable
- ❑ Orders carry explicit lifecycle & provenance
- ❑ Samples preserve chain of custody
- ❑ Medication ordering & administration stay distinct
- ❑ Bed transfers are atomic
- ❑ Discharge closes without destroying history
- ❑ Billing derives from real chargeable events
- ❑ Corrections use reversal, not deletion
- ❑ Access control is enforced server-side

See the whole stay, end to end.

Walk through registration to discharge in a live demo, with your own department leads in the room.
